EMIS Concepts and Protocols

Duration: 4 hours

Who is this course for? Anyone who is required to create, edit and manage concepts and protocols as part of their job role

Aim: To manage concepts and protocols effectively in EMIS Web

Learning Objectives

- Create protocols to add a code, add medication, generate a document, launch a template, display a free text message and display an alert
- Run protocols manually
- Add triggers so protocols run automatically
- Create simple concepts to search on age, sex, clinical codes or medication
- Use concepts in protocols to generate alerts
- Use concepts to set visibility rules in clinical templates
- Export/import concepts and protocols
- Deactivate/archive protocols and concepts

Learning Outcomes - at the end of the session learners will be able to:

- Build and organise an appropriate folder structure.
- Search for an existing protocol and/or concept.
- Create, edit and save a protocol to a given specification using any of the Decision and Action Nodes.
- Test a protocol.
- Add or remove a protocol trigger.
- Manage protocol triggers using the Trigger Viewer.
- Import and export a protocol
- Create, edit and save an appropriate concept to a given specification.
- Apply a concept to a protocol.

Change the status (Activate, Deactivate, etc.) of a protocol and/or concept
